ASSIGNMENT 1 :

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.
A) How will you achieve this in AI?
B) Find out the 3 -Stage of Problem Identification
C) Name the project
D) Create the dummy Dataset.

1. The AI model predicts which employees may be considering resignation, giving the organisation time to address concerns and plan project coverage.

2.Problems identified:

1. No backup measures are in place when employees resign.
2. Project deliverables may be delayed.
3. The organisation does not measure workplace challenges employees faces

3.Project name: employee resignation risk estimation

4.

Resignation date	Designation Experience in organisation (years)	Overall experience (years)	Skills	Hike details	Workplace feedback (1–5)	Workload / overtime hours per month	Promotion history	Resigned within 6 months?
